SUCTION UNIT

The suction unit is made of an electric fan which guarantees elevated air flow.

FILTER UNIT

The large surface star antistatic filter, located inside the filter chamber, is made of polyester and provides high resistance against clogging and passage of fine dust. It is possible to clean the filter using an integrated mechanical system: an external lever shakes the filter vertically and enables to clean the filter thoroughly and safely, maintaining constant suction performance and preventing any dispersion of dust in the environment.

COLLECTION UNIT

The detachable steel collection tank has a quick release system for the rapid disposal of the sucked material.
