INDUSTRIAL VACUUM SOLUTIONS

SUCTION UNIT

The suction unit is a side channel blower, with direct coupling between the motor and the impeller fan. It designed without any transmission system, and is therefore silent, totally maintenance free and suitable for continuous duty operations.
A pressure relief valve protects the motor, providing additional air for cooling.

FILTER UNIT

Cartridges are automatically cleaned by a pneumatic reverse pulse cleaning system.The system is automatic, timed and adjustable. A compressor placed on the back frame guarantees the required air supply.
The polyester cartridge filter placed inside the filter chamber guarantees a large filter surface and prevents the clogging of the filter.

COLLECTION UNIT

The vacuumed material is discharged inside a 20 mt Endless Bag; when the extremity of the bag is full, the operator can seal and dispose that part of the bag in total security, without coming in contact with dusts and spreading them in the environment

OPTIONALS

- ✓ ABSOLUTE HEPA FILTER /H14
